JOURNAL OF THE IRON AND STEEL INSTITUTE

VOLUME 182 1956

SUBJECT INDEX

[References to papers and articles given in full text are indicated by the word (*Paper*) following the page number.

Indexing of Alloy Steels and Other Alloys: In the indexing of alloy steels, carbon and iron are ignored and the alloying elements contained in the steel are arranged in alphabetical order; for example, all references to nickel–chromium–molybdenum steel will be found under the heading chromium–molybdenum–nickel steel. In the indexing of other alloys, carbon and iron, when present, are included in the title; iron, when present, is always mentioned first and the other elements follow in alphabetical order, carbon being in all cases mentioned last. Examples: "Iron–silicon–carbon alloys" and "iron–chromium–nickel–carbon alloys."]

Refractory Materials, 103, 221; acid converter, lining temperatures, 223; aluminous, contraction tests, 221; analysis, 116; basic, survey, 221; classification and specification, 221; diffusion of FeO in Al_2O_3, 103; Fe–Al–Cr–Mg–O, Fe–Cr–Mg–O, and Fe–Mg–O systems, 221; FeO–Al_2O_3 system, e.m.f. measurement, 103; in Great Britain, survey, 221; lime–ZrO_2–TiO_2 system, 103; lining bricks, corrosion and erosion, 221; MgO–Al_2O_3 system, e.m.f. measurement, 103; MgO–ZrO_2–TiO_2 system, 103; mixes, 221; new kinds, 103; open-hearth, 103; physical phenomena under stress, 103; raw materials for open-hearth (basic), 103; selection of furnace lining, 314; steel casting bricks, 221; in U.S.A., production, 221; *see also* Metal–Ceramics
Refractory Materials (Alumina), contraction tests, 221
Refractory Materials (Alumino-Silicates), constitution, properties, applications, 103; physico-chemical characteristics, 221
Refractory Materials (Carbon), in blast-furnace, effect of pig iron and slag, 103; blast-furnace hearth, bottom, 103; blast-furnace hearth, thermal efficiency, 103; blast-furnace refractory, 103; survey, 221
Refractory Materials (Chrome-Magnesite), 103
Refractory Materials (Dolomite), 103
Refractory Materials (Dolomite–Magnesite), 103
Refractory Materials (Fireclay), survey, 221
Refractory Materials (Magnesite), deposits of Greywacke zone of Salzburg, 221
Refractory Materials (Silica), applications, properties, 103; ovens at Derwenthaugh, 220; survey, 221
Refractory Materials (Spinel), iron-oxide containing (III), phase relationships 221
Regenerators, crossflow, heat transmission, 220
Reheating Furnaces, 226; design, operation, and control, 317; for ingots, 317
Relaxation, strength in solid solutions, theory of, 322
Replicas, Cu-collodion, 326; techniques for electron microscope, 236
Residual Stress, effect of heating, 322; effect of induction hardening, 323; heavy-wall cylinders, 322; in surface layers during machining, 231; in welded structures, 318

Resins, epoxide, manufacture and application, 111; ion-exchange, 115, 117, 239; patternmaking, 225; in plastic tools, 231; silicones in protective coatings, 112
Rhodesia Railways, 323
Rigidity, Modulus of, Co, Cr, Fe alloys, effect of nickel, 325; ultrasonic determination, 324
Rings, ferrous and non-ferrous, manufacture, 231
Rockets, metals for, 325
Rod Mills, Carpenter Steel Co., 107; guides and strippers, 390 (*Discussion*)
Roll Bonding, tube forming, 108
Roll-Drawing, tubes, power requirements and forces developed, 228
Rolled Steel, prices and specifications, 118
Rolling, coiling hot strip, 107; crystal orientations, study, 327; flat, and tinning, 112; lubricants, 108; shapes in alloy steels, 107; *see also* Cold Rolling
Rolling Mills, 107; bar, 107; bar, rod, strip, 107; bar, strip, and shapes, 107; continuous, 107; conveyors, 108; electric drives, control by magnetic amplifiers, 108; electric drives, equipment and magnetic and rotating amplifiers, 108; magnetic amplifier equipment, 108; multiple-purpose, automatized, 107; plate, 107; reel performance, 107; shear stop blocks, 108; strip and tinplate, 107; strip and wire, 107; tinplate, 107
Rolls, refacing by welding, 318
Rosin–Rammler grain-size distribution, 320
Rotating Amplifiers, cold strip mill drive, 108
Rotherham, plant extensions, 227
Rotors, manufacture, 106
Royal Dutch Blast Furnaces and Steel Works, wear and tear problems, 230
Russia, ceramic-tipped tool research, 231; iron and steel industry, 118; metal-chip briquetting, 230
Rust, inhibitors, 238; mechanism, 330; regeneration of solutions for removal of, 110
Rynalloy, development of, 325

Salt Baths, 226; sulphiding of steel cutters, 318; thermo-chemical treatment, 317
Salt Spray Test, atmospheric-corrosion guide, 330; 'salt-fog' method, 330
Salts, ferromagnetic, 324
Salzgitter Ore, wet dressing plant, 219
Sample Tests, 335
Sampling, coke, 102; combustible minerals, 333; hydrogen in liquid steel, 116; ladle analyses, 332; weld-probe, of piping systems, 109
Sands, dressing, 219
Sandusky Foundry and Machine Co., centrifugal casting, 225–226
Saugus (Mass.), ironworks restoration, 118
Scale, effect of addition on refining temperature, 223; in ingot moulds, 316
Scaling, penetration at high temperatures, 227
Scarfing Machines, smoke control, 108
Scleroscope, hardness test, standardizing, 323
Scotland, mechanized foundry, 229
Scrap, effect on steel quality, 223; supply problems, 313
Scrubbers, dust, 229; water, for air-pollution control, 104
Scunthorpe, special meeting, 2
Seamless Pipe, expanding machine, 108
Seamless Tube, Mannesmann process, 108
Seizing, prevention, 108
Semi-Finished Products, continuous rolling-mill, 107
Sendust, transition temperature, 115
Sendzimir Mills, Firth-Vickers, 107
Separation, electrolytic, 333
Separators, mechanical, 101
Servo Control, electropolishing of wire, 111
Shears, billet, 108; stop blocks, 108
Sheet, drawing, 227; drying, formulæ, 110; forming on Bath-type machine, 107; iron, magnetic, 321; painted and immersed in sea-water, corrosion of, 330; plastic-bonded metal, 118; pressing, 227; roll-bonding into tubes, 108; rolling and recrystallized structures, 327; seam welding, 109; weight variations, 107
Sheffield, cutlery trade, 118; pig iron for, 103
Sheffield Metallurgical Association. *See* Affiliated Local Societies
Sheffield Society of Engineers and Metallurgists. *See* Affiliated Local Societies
Sheffield Steel Corp., plate mills, 107
Shell Cases, failure during drawing, 107
Shells, production, 319
Ship Plate, corrosion and pitting, ultrasonic thickness gauge, 239; flame cutting, 109; welding procedure tests, 109
Ships, merchant, coatings for submerged parts, 331; plate. *See* Ship Plate; weld inspection, 110; welded, review of failures, 231
Shore, hardness test, standardization, 323
Shot Peening, tank torsion bars, 323; wire shot, 319
Shrinkage, in welded constructions, 231
Sidings, foundry, 316
Sieving, action of moisture, 320
Sigma Phase, in stainless-steel weldments, 328
Silica, activities in molten slabs, 104; washing with ammonium tartrate, 332; *see also* Refractory Materials (Silica)
Silicate Inclusions. *See* Inclusions
Silicates, chemical analysis, 333
Silicon, colorimetric micro-determination 117; determination in ferrous metals 117; determination in iron and steel, 332; direct spectrometric determination, 117; effect on action of C in iron, 118; effect on blue-brittleness, 114; equilibrium in molten iron, 104; in ferromanganese blast-furnace, 74 (*Paper*); influence on corrosion resistance of 18/8/Ti steels, 241 (*Paper*); reaction in ferromanganese blast-furnace processes, 105
Silicon Alloys, electrical resistivity and thermoelectric power, 324
Silicon Iron, growth- and heat-resistance, 225
Silicon Nitride, isolation, 307 (*Letter*); isolation from Si steel, 332
Silicon Steel, brittle fracture, 324; isolation of silicon nitride, 307 (*Letter*), 332; magnetic powder patterns, 324
Silicone Resins, protective coatings, 112
Silicosis, preventive measures, 119
Silver, chemical and electroplating baths, 111; filler metal for brazing, 110; recovery by leaching, 101
Sinter, use of pyrrhotite residues, 219
Sintered Carbides, effect of niobium and tantalum carbides, 320; structure of welded-on layers, 237; wire-drawing dies, electrosparking machining, 231
Sintering, copper, 102; fines, 101; molybdenum, 102; nickel, 102; theory, and properties of products, 112; tungsten, 102
Slags, alloying of cast iron in cupola, 106; analysis, 116; blast-furnace, cement, uses, 104; blast-furnace, effect on carbon refractories, 103; blast-furnace, equilibrium with Si, 104; blast-furnace, microexamination of high-alumina, 104; cement, properties and uses, 104; cements, survey of uses, 222; desiliconization and desulphurization with, 313; determination of free lime, 116; expanding method, 104; frothing in O.H. furnace, 314; interfacial tension with molten iron, 313; ladles, improved service life, 222; manganese, research in U.S.A., 105; soda, separation from hot metals, 313; thermodynamic properties, 314; treatment and uses, 104, 222
Smelting, Low-Shaft, of iron ore, 222
Smoke Control, electrostatic precipitators, 108
Soaking Pits, 226, 317; Abbey Works practice, 3 (*Paper*), 106; cranes, adjustable pincers for, 230; design, operation, and control, 317; Fairless Works, 226; materials handling, 229; practice, 226
Société Lorraine-Escaut, billet furnace at Thionville Works, 317
Soda slag, separation from hot metals, 313
Sodium, corrosion of iron by oxygen-contaminated, 43 (*Paper*), 116; determination in mixed Na and Fe oxides, 48 (*Appendix*)
Sodium Chloride, corrosion resistance of materials to, 114
Sodium Hydride, descaling, 111
Sodium-Stannate–Zinc-Cyanide Solution, 112
Softening, cold-drawn low-carbon steel, 106
Soil, corrosion, 329
Solar Furnace, 314
Soldering, wettability and strength, 110
Solid Solutions, relaxation effects, 322
Solidification, alloys, phenomena, 235; castings, 316; castings, application of sub-sonic vibrations, 316; steel, effects of gravity, 366 (*Paper*)
Solids, physical phenomena under stress, 103; surface tension, 335; wetting effect, 335
Solubility, gases in metals, 322; graphite in Co, Mn, and Ni, 274 (*Paper*), 325
Solutions, chromic-acid–acetic-anhydride, explosion, 388 (*Letter*)
Sonic Applications, 324
South Africa, continuous rolling-mill, 107
Specific Surface, powders, 113
Spectra, iron, wavelength and intensity standards, 335
Spectrographic Tests, influence of structural constituents on ΔS value, 116; *see also* Analysis
Spherical Particles, size distribution, 119
Spheroidal Graphite Cast Iron, effects of additions on matrix, 315; formation by inoculation, 225; high-silicon, growth- and heat-resistance, 225; isothermal hardening, 106; production, properties, and use of T.I.S. Co. pig iron, 225; sulphurization resistance, 315; theories of formation, 315; welding, 110
Spinel. *See* Refractory Materials
Spinning, hydraulic machine, 107; stretch-flow forming lathe, 228
Sponge Iron, direct process, in Sweden, 104
"Spout Metallurgy," 224
Spraying, aluminium, wire process, 112; fused-in-place coatings, 112; hard facing, 109; vitreous enamel, 111; zinc, wire process, 112; *see also* Flame Spraying
Springs, design factors, 80 (*Paper*), 118; fatigue testing, 233; wire, for valves, 228
Staffordshire Iron and Steel Institute. *See* Affiliated Local Societies
Stainless Alloys, Allegheny Metal 350 (AM 350), 115
Stainless Materials, progress review, 118
Stainless Steel, A.I.S.I. designations, 117; austenitic, high-manganese, 114; austenitic, intergranular corrosion, 116; austenitic, radiation stability, 114; austenitic, stress-corrosion cracking, 238; chemical apparatus, 334; coke-oven by-product industry, 334; corrosion, in hydroelectric plants, 239; corrosion by nitric acid, 238; corrosion resistance of equipment, 115; deformation of tubes, 232; development survey, 334; etching agents for, 326; extra-low-carbon, 114; hardness of castings, 106; high-manganese, 114; high-temperature aircraft service, 114; history, properties, and uses, 334; influence of crystal boundary precipitation on work hardening, 115; intergranular corrosion, 116; niobium-bearing, welding cracks, 110; pickling, 111; plastic potentials, 322; progress

Stainless Steel—*Continued*
review, 118; radiation stability, 114; railway coaches, for, 118; resistance welding of strip, 110; review, 114; sigma phase, 328; spectrographic determination of Mn and Nb, 117; stress corrosion, 238, 329; stress-corrosion cracking, 124 (*Paper*), 238; stress/strain relationship, 354 (*Paper*); strip, descaling, 319; surface protection during heat-treatment, 317; true stress–strain tension tests, 232; tube, hot extrusion of, 228; type 347, welding, 109; valve seatings, 114; valves, corrosion of, 331; water turbines, 118; welding, of type 347, 109; welding characteristics, 230; welding cracks, 110; *see also* Chromium, *etc.*, Steel
Stamping, 106, 227; die costs, 227; die design, 227; mechanism and process of deformation, 107; Peterson Products Corp., plant and products, 107

notched slow bend, 299 (*Appendix*); magnetic. *See* Magnetic Flaw Detection; overhead travelling cranes, 230; railway wheels, 229; refractoriness-under-load, 103; reverse bend, on carbon steel wire, 337 (*Paper*); salt spray. *See* Salt Spray Test; sample, 335; stress corrosion, 238; tensile. *See* Tensile Tests; torsion. *See* Torsion Tests; ultrasonic. *See* Ultrasonic Inspection; weldability. *See* Weldability; welds in pressure vessels and ships, 110; wire-drawing, for lubricants, 108
Thermal Conductivity, gas analysis by measurement of, 117, 333; high-temperature apparatus, 235; theory and method of Kohlrausch and Diesselhorst, 321
Thermal Expansion, Co, Cr, Fe alloys, effect of nickel, 325
Thermobalance, use of Chevenard-type, 116
Thermo-Bimetals, properties, 236
Thermocouples, gas temperature measurement, 103; immersion (Degussa), 221; immersion errors, 103
Thermodynamics, activity of sulphur in Fe–S–C liquid alloys, 224; control of blast-furnace process, 222; effect of Si on C in iron, 118; free-energy maps, 119; slags, 314; structural constituents of steels and ΔS values, 116
Thermoelectric Power, alloys of Si in Cu, Ni, and Fe, 324
Thickness Measurement, ultrasonic, 321, 324
Time and Motion Study, power-press operations, 107
Timken Roller Bearing Co., vehicle maintenance, 229
Tin, colorimetric and polarographic determination, 332; corrosion, 332; determination in ferro-molybdenum, 332; determination in ferro-tungsten, 116; effect on impact properties, 322; electro-chemical behaviour, 320; *see also* Tinplate
Tin Alloys, corrosion resistance, 331; electrodeposited coatings, 112, 320
Tin Ore, cassiterite, concentration, 219
Tinplate, corrosion, 332; electrolytic *v.* hot-dip, 112; electroplating, 111; solutions, throwing and covering power, 111; U.S. Steel Corp. flat-rolling plant, 112; *see also* Tin; Tin Alloys
Tinplate Mills, Fairless Works, 107; La Magona d'Italia, 107
Tin–Zinc Alloy, electrodeposited coatings, 112
Titanium alloy in cast iron from slag, 106; chromium steels, effects on, 325; complexometric determination (chelatometry), 116; determination, 116; determination in alloy steel, 333; determination in ferrous metals, 117; determination in iron and steel, 332; developments, 118; galling and seizing of surfaces, 108; influence on corrosion resistance of 18/8/Ti steels, 241 (*Paper*); resistance welding, 110; salt baths containing, 317; separation in iron ores, 104; -stabilized stainless steel, resistance welding, 110
Titanium Carbide, metal–ceramics, 103
Titanium Nitrides, formation in weld metal, 231
Titanium Steel, surface protection during heat-treatment, 317
Tool Steel, alloying elements, 325; effect of composition on properties, 114; high-chromium, induction heating and structural changes, 115; investment casting, 226; rolling of shapes, 107
Tools, ceramic-tipped, in Russia, 231; plastic, 231
Torsion Bars, shot-peening for fatigue resistance, 323
Torsion Tests, adhesion of vitreous enamels, 320; mild-steel wire, deformation and ageing, 231; spot-weld assessment, 318
TOR-Stahl 40, tests on, 321
Toughness, effect of Al in medium-carbon steel, 232
Town Gas, determination of NO, 333
Tracers, electronic and magnetic for flame cutting, 110; radio-active. *See* Radio-Active Tracers
Traffic in Iron and Steel Works, locomotive operation, 30 (*Paper*), 108
Transfer, Metal, analysis of, 324; effect of atmosphere, 234
Transformations, austenite–martensite, 328; austenitic Cr–Ni steels, 235; carbon steels, 326; ferrite, 328; gamma-pearlite in eutectoid steel, 115; high-chromium tool steel, on induction heating, 115; iron and non-ferrous alloys, on induction heating, 115; isothermal, effect of quenching, 227; isothermal austenite in low-alloy steels, 115; martensite, in steel, 328; order–disorder, of iron–cobalt alloys, 235; pearlite–austenite, initial temperature, 115, steel, on induction heating, 115
Transformer Alloys, dynamic magneto-striction, 234
Transformer Iron, electrochemically treated, magnetic properties of, 234
Transformers, theory, applied to induction furnaces, 224; welding, surge injection, 319
Transition Temperatures, brittleness, of arc-welding electrodes, 110; carbon steel, effects of heat treatment and microstructure, 292 (*Paper*), 326; nickel steel plate, effect of welding, 318; pressure-vessel steels, 115; Sendust, 115
Tubes, aluminium alloy, stress–strain relation, 233; boiler, stress-corrosion cracking, 331; cold roll-drawing, 228; dry-galvanizing plant, 112; electric weld innovations, 108; fabrication and forming assessment, 106; pickling, of special steel, 111; protective coatings and steam dissociation, 329; roll-bonding from sheets, 108; rotary straightener, 108; seamless, Mannesmann and allied processes, 108; special shapes, 228; special steels for, 325; stainless-steel, hot-extruded, 228; steel, texture of deformation, 232; straightener, 108
Tungsten, coil furnace, 235; effect on temper brittleness, 234; sintering, 102; wire, electropolishing, 111
Tungsten Carbide, hardness, 231
Turbines, gas, materials and manufacture 333; steam, forgings and castings for, 325; welding type 347 stainless steel, 109
Turbo-Blowers, iron and steel industry applications, 103
Turbo-Compressors, plant at Scunthorpe, 229
Turkey, steelworks extensions at Karabuk, 104
Tyres, centrifugal casting, 316

Ultrasonic Testing and Inspection, accuracy check, 234; apparatus, methods, and application, 324; developments, 324; forgings, 321; nodular and grey iron differentiation, and thickness measurement, 324; pulse echo and transmission techniques, 234; reflection and transmission technique, 234; semi-finished steel products, 321; sounding apparatus, 324; thickness gauge, 239; *see also* Ultrasonics
Ultrasonics, application to melt quality and waste-gas purification, 324; attenuation measurements, 321; elastic constants, determination, 324; forging control, 321; machining, 319; new applications, 235; thickness gauge, 321; *see also* Ultrasonic Testing and Inspection
United States, blast-furnace and coke-oven productivity, 221; constructional

United States—*Continued*
steels, 325; continuous-casting installations, 224; corrosion activities, 329; cost accounting, 335; electric-arc-furnace developments, 224; failures in welded ships, 231; gas carburizing and carbonitriding, 227; guns, history of, 334; iron and steel industry, 118; Littleton Ridge manganese deposit, 219; manganese ores and slags, research, 105; refractory materials, 221
United States National Bureau of Standards, corrosion laboratories, 237
United States Steel Corp., continuous butt weld pipe mill, 108; flat rolling and tinning plant, 112; Geneva Works 223; ore bridges, 219; seamless-pipe expander, 108
Uranium, recovery by leaching, 101

Vacuum-Melting of Alloys, 314
Valves, corrosion of stainless-steel, 331; friction losses, 211 (*Appendix*); seatings, materials, 114
Vanadium, additions to steel castings, 225; determination in alloy steels, 156 (*Paper*), 239; determination in ferrous metals, 117; determination by pyrocatechol, 332; influence on properties of die steel, 232; rapid determination in steels, 117; use against strain ageing, 113
Vanadium Pentoxide, attack, mechanism of, and resistance to, 195 (*Discussion*); corrosion of heat-resisting alloys due to fuel oil ash, 116
Vapours, extraction plants, 110
Vehicles, maintenance, 229
Ventilation, in pendulum grinding shop, 110; suction-plant shops, 110
Vermiculite, dressing, 219
Vickers, Sons and Maxims, development, 118

Wagons, steelworks, electrically operated, 229, 230
Waste Treatment, chromium, cyanide solutions and water, 108
Wasters, in steelworks, causes and prevention, 223
Water, acid river, corrosion, 329, 330; coal washing, 102; corrosion, 329; harnessing equipment, steels for, 118; iron bacteria in, in gasholder, 238; waste, treatment of, 108
Water-Gas Generators, 220
Water Hammer, effects in forging presses, 211 (*Appendix*)
Wear, accelerated test, 232; analysis of, between specimen pairs, 324; effect of atmosphere, 234; surface, reduction by flame-hardening, 226
Wear Resistance, cast-iron brake shoes, 315; chromium diffusion, 111; chromium plating, 111; chromium plating, hard, 111; connection with friction, 108; manganese–titanium pearlitic malleable iron, 225; steel cutters, sulphided, 318; surface treatment with sulphur, 108
Weight, ferrous and non-ferrous metals, tabulation, 119; sheet variations, 107
Weld Metal, mild steel, factors affecting composition, 109; titanium nitrides, formation, 231
Weldability, effect of preheat temperatures, 109; interpretation proposals and tests, 110; low-alloy steels, 325; resistance, of Al, Mg, Ti, and other metals and alloys, 110; titanium surfaces, 108; toughness of, 230
Welded Construction, components cast and welded, 334; shrinkage stresses and deformations, 231
Welded Structures, residual stresses in, 318
Welding, 109, 230, 318; aircraft, fatigue aspects, 318; arc, of alloy steels, 230; arc, of cast iron, 318; arc, cost measurement, 110; arc, metallic rectifiers, 109; arc-length control equipment 110; argon-arc, arc striking, 110; Argonaut process for carbon steel, 318; automatic arc, economic uses, 110; butt, of carbon steels, fatigue strength, 109; corrosion fatigue of low-carbon steel joints, 113; crane-wheel repairs, 231; D.C. arc, power sources, 109; flash, of steels, 318; flash, temperature distribution, 109; in France, 318; gas, of rails, 231; hard facing. *See* Hard Facing; hard-zone formation in alloy steels, 110; inert-gas, of stator packs, 110; inert-gas equipment, 318; inert-gas metal-arc, of mild steel, 230; inert gas metal-arc, use of CO_2, 109; inert-gas metal-arc overlays, penetration and dilution of overlays, 110; nickel overlays, 109; nickel steel plate, effect on transition temperature, 318; niobium-bearing stainless steel, 110; oxy-acetylene pressure, of aircraft undercarriage, 230; oxy-fuels for, 318; pipe, continuous butt weld, 108; plated steels, 318; preheat temperatures, calculation, tables, 109; pressure vessels, by inert-gas metallic-arc machine, 319; pressure vessels and ships, inspection and testing, 110; projection, edge-ring, 110; rails, 318; refacing rolls, 318; resistance, electronic control equipment, 318; resistance, of high-temperature alloys, 110; resistance, macro-etch acceptance test, 109; resistance, research at B.W.R.A., 109; resistance, stainless-steel strip, 110; resistance, survey of development, 318; resistance, variables, 230; resistance, weldability of Al, Mg, Ti, and other metals and alloys, 110; rings, 231; rolled steel beams, fatigue tests at normal and sub-zero temperatures, 114; seam, of low-carbon steel sheet, 109; semi-automatic submerged arc, 110; ships, review of failures, 231; spot, assessment by torsion test, 318; spot, fatigue resistance, 319; spot, oscillographic control, 318; spot, of steels, with high resistance, 318; spot, temperature distribution, 110; spot, using inert-gas tungsten-arc process, 318; stainless steels, 230; steel penstock at Kemano, 319; steels and S.G. cast iron, 110; Tee connections, 110; tubing, 108; type 347 stainless steel, 109
Welding Electrodes, arc, rate of melting, 231; arc, transition temperature of brittleness, 110; austenitic 18-8, moisture absorption rates, 319; coated, rutile-type, titanium nitride formation from, 231; contact type, 318; covered, weld metal deposited by, 109; hardenability, 318; iron powder, 318; recent types, 231; research and development, 319; Standard DIN 1913, 231; for unalloyed and low-alloy steels, 110
Welding Transformers, surge injection, 319
Western Germany, iron and steel industry, 118
Western Rolling Mills, Inc., rolling mill, 107
Wettability, low-temperature brazing, by droplet method, 110
Wetting, solids, 335
White Cast Iron, atlas of microstructures, 328; graphitization, 328; structure at high temperatures, 106
Winkler Method, improved, for determination of oxygen in gases, 333
Wire, aluminium, hot-dip coating, 112; annealing furnace, 106; brass, automatic pickling, 319; copper, pretreatments and lubricants for, 229; electropolishing, servo control, 111; fatigue testing, 233; length measurement of insulated and bare, 229; machines for netting and grid manufacture, 117; metallized Al and Zn, 112; production at Acinda Co., 107; production, Turks heads, 228; pure iron, 228; temperature meter, 307; *see also* Steel Wire
Wire Drawing, alloy steels, 334; calculation of force, with backpull, 228; calculation of force, with work hardening, 228; carbon steel, with back tension, 228; lubricants, 229; lubrication tests, 228; pass-reduction/capstan-speed relation, 229; pure iron, with back tension, 228; steel, with and without backpull, mechanical properties, 229; test for lubricants, 108
Wire Industry, accident prevention, 228; electric reel drives and torque motor performance, 228
Work Hardening, contraction ratio, 160 (*Paper*); contraction ratio, 233; influence of crystal boundary precipitation, 115; mild steels, influence of annealing on impact properties, 113; in wire drawing, 228
Work Softening, 266 (*Paper*), 320
Wrought Iron, corrosion resistance, 305 (*Correspondence*); history, 237

X-Rays, analysis of moulding materials 316; brittle fracture, study, 232; diffraction, creep examination technique, 321; diffraction, decomposition of martensite, study, 328; diffraction, goniometer, high-temperature, for, 335; diffraction, metallographic applications, 327; diffraction, powder camera, 324; diffraction analysis, techniques, 321; diffraction investigations, with tungsten coil furnace, 235; diffraction patterns, 235; iron–aluminium–silicon system, study, 236; nitrided layers of alloy steels, study, 329; scope of, 324; spectroscopic analysis, techniques, 321; surface studies of solids, 326; visual examination by transmission images, 235

Yield, mild steel, under impact, 322
Yield Point, elongation of low-carbon steels, 234
Yielding, dynamic, of metals, 322; low-carbon steels, 232; plastic, 322
Young's Modulus, carbon steel, wetting effect, 335; ultrasonic determination, 324
Yugoslavia, iron and steel industry, 118, 335

Zinc, attack on iron, 112; flame-sprayed, mechanical properties, 112; plastic potentials, 322; recovery from blast-furnace flue dust, 102; spraying, wire process, 112
Zirconium, corrosion resistance, 239; determination, 116; determination in ferrous metals, 117

NAME INDEX

NOTE—Names with prefixes will be found under the initial letter of the prefix, the prefix and the remainder of the name being considered as one word for alphabetization.

Double-barrelled surnames are indexed under the the first name of hyphened names, and under the second name of unhyphened names

Abd-El-Wahed, A. M., corrosion fatigue of low-carbon-steel welded joints, 113
Abe, H. *See* Sano, K.
Abendroth, H.-J. *See* Fischer, W.
Abesque, F. *See* Claisse, F.
Ablett, C. A., obituary notice, 121
Abramski, C., Longwy–Burstlein coking-coal preparation process, 102
Adachi, A., and **Y. Murakami,** gas carburizing, 226
Adachi, A., and **S. Yamada,** bright annealing in propane, 227
Adachi, H. *See* Sasaki, A.
Adamson, J. L., obituary notice, 397
Adcock, J. N., testing of railway wheels, 229
Agte, C., and **V. Dufek,** properties of sintered carbides, 320
Ahern, P. J., and **J. F. Wallace,** centrifugal casting, 316
Åkesson, K., feeding and solidification, 316; *see also* Broberg, J.
Akimenko, A. D., and **A. A. Skvortsov,** rotating-piston air-blowers, 222
Akshentseva, A. P. *See* Gulyaev, A. P.
Alexander, W., dynamic magnetostriction in transformer stampings, 234
Al'Ferov, A. P., and **N. K. Lekarev,** lining crucibles for H.F. furnaces, 221
Altimov, A. B., and **A. P. Gulyaev,** martensite transformation, 328
Allen, N. P., trace impurities in iron, 114
Allen, Sir R., obituary notice, 397
Allen, W. A., and **W. Goldsmith,** high-amplitude pulse in steel, 232
Althof, F. C., austenitic manganese steel castings, 315; inter- and transcrystalline corrosion, 330
Amano, A. *See* Ikegami, T.
Amano, K. *See* Yasuda, K.
Ambrose, S. A. *See* Boas, N. S.
Ambrosetti, R. *See* Piontelli, R.
Ammen, C. W., designing a small cupola, 314
Anastassiou, B. D., elected Member, 122
Antill, J. E., and **P. Murray,** thermodynamic properties of slags, 314
Aoki, I., and **T. Tottori,** oxygen-blown iron, 224
Arenas, E. Asensi Alvarez. *See* Lopez de Azcona, J. M.
Arend, H., and **W. Neuhaus,** *Book*: "Die Hartbarkeit des Stahles," 335
Armstrong, T. N., and **W. L. Warner,** welding of nickel steel plate, 318
Arnold, T. H., austenitic manganese steel, 325; biographical note, *facing* 120
Aronson, E. V. *See* Fuks, M. Ya.
Asakura, K. *See* Ueda, T.
Asano, E., heat-resisting steel, 321
Asensi Alvarez Arenas, E. *See* Lopez de Azcona, J. M.
Ashton, G. W., cold-rolling mills, 107
Aubrion, G. *See* Ferry, M.
Ault, G. M., and **G. C. Deutsch,** high-temperature powder-metallurgy alloys, 113
Axon, H. J. *See* Graham, L. W.

Baake, R., iron and steel production from inferior materials, 104
Baake, R., and **J. Tischendorf,** carbon bricks, 103
Baas, G. *See* Rathenau, G. W.
Baba, Z. *See* Okada, M.
Babcock, R. S., inert-gas metal-arc cutting, 318
Backofen, W. A. *See* Powell, G. W.
Bacon, C. H., open-hearth charging, 178
Bading, W., refractory temperatures in acid converter, 223
Baerlecken, E., and **W. Hirsch,** behaviour of austenitic Cr–Ni steels, 235
Baerlecken, E., and **W. Scheurer,** steels for oil-field pipes, 334
Bailey, A. I., and **J. S. Courtney-Pratt,** boundary lubricant, 108
Bailey, J. J., instrumentation of coke-oven plant, 220
Bailey, R. W., correspondence on creep, 191
Baker, H. R., volatile rust inhibitors, 238
Baker, J. J., R. D. Beck, and **M. L. Pouilly,** spraying of vitreous enamel, 111
Baker, J. R., elected Member, 122
Baker, S. W., chemical nickel plating, 111; metal-bonded plastic sheet, 118
Baker, W. A., mould reaction in casting non-ferrous metals, 317
Bakovsky, E., ball pebbles, 105
Ball, C. S., biographical note, 95; *see also* Tardif, H. P.
Banner, E. H. W., electrical pressure measurements, 233
Bardgett, W. E., and **M. G. Gemmill,** *Paper*: "Causes of Variable Creep Strength in Carbon Steel." *Discussion*, 183. *Correspondence*, 189, 306. *Authors' Replies*, 191, 306
